Marubeni Helps Precision Manufacturer Increase Productivity

When your company is on a fast growth path, keeping up with product demand can be challenging. Paul Villemaire, president of C and M Machine Products, Hudson, NH, a manufacturer of precision screw machine parts is meeting and exceed his company's fast-paced product demand with the aid of Marubeni Citizen-CINCOM turning centers for the manufacture of tight-tolerance precision screw machine parts.

Villemaire says that his company has gone from a \$1 million company to a \$15 million company in five years. "When we were doing a million dollars we had 27 direct labor people," he explains. "Today, we're doing \$15 million, and have about 60 direct labor people."

The Citizen turning centers are helping the company increase productivity, he says, particularly due to their automated capabilities. In addition to the turning centers, C and M Machine Products also purchased automatic bar loading equipment so unattended CNC machines are able to run on weekends when no one is there. "That has really helped us increase productivity,"

Villemaire says. "After conducting

a lot of research, I feel that Marubeni has the best machine on the market."

Since its inception 15 years ago, Marubeni Citizen-CINCOM has manufactured and serviced the turning centers which are used in the manufacture of medical instrumentation, electronics, fiber optics, automobiles, business machines, aerospace, defense, firearms, tools, valves, fasteners, and other products. Marubeni Citizen-CINCOM is headquartered in Allendale, NJ.
